Summary

Business operations and analytics professional with experience in manufacturing, supply chain, and sales operations. Led consignment workflow redesign and developed inventory analysis and international fulfillment procedures. Uses SQL, Excel, DOMO, and Power Automate to support purchasing and production decisions, automate reporting, and resolve ERP data issues.

Professional Experience

Business Operations Analyst II / Digital Dynamics, Inc.

Sep 2024 - Sep 2025

Consignment operations

- Led the redesign of Lam Research consignment workflows in SYSPRO, separating shipment and invoice orders, with unconsumed stock billable 90 days after delivery to consignment.
- Reconciled consignment sales orders and cleared obsolete orders, enabling finance to invoice consumed inventory, close paid orders, and reconcile billing records.
- Authored consignment procedures approved through Document Control Notices (DCNs), defining planning, shipping, receiving, and finance responsibilities; replaced word-of-mouth practices to support reliable shipment tracking, faster invoicing, and program expansion.

Inventory planning and reporting

- Developed 6–12-month inventory burn-down projections for the VP of Operations, combining stock, incoming POs, production jobs, forecasts, and unit costs to show projected excess inventory value and guide component purchases and PO cancellation decisions.
- Combined consignment forecasts and standard sales-order demand across a 26-week horizon with available inventory, open purchase orders, and production jobs to identify quantities to transfer, buy, build, or pull in.
- Automated weekly supplier Open Order Reports using SQL, Excel, and Power Automate Cloud, reducing manual preparation and distribution effort by approximately 90%; purchasing retained delivery-date updates and exception follow-up.
- Wrote SQL queries and developed ODBC-connected Excel reporting using SYSPRO purchasing, inventory, and order data; maintained DOMO dashboards tracking order status, inventory consumption, and gross margin exposure.

Systems and international operations

- Validated ERP data and resolved BOM and forecast inconsistencies during Forecast2 MRP testing and implementation; investigated ERP transaction and reporting issues with operations and IT.
- Developed two approximately 30-page shipping procedures, formally approved through DCNs, covering shipment readiness, packaging, MyLam shipment updates, and FedEx and UPS workflows.
- Established packaging and shipping instructions for the Vietnam facility, including requirements to prevent stainless steel oxidation in transit; coordinated across time zones to address shipment timing and conformance with company specifications.
- Researched a U.S. tariff and related legislation and contacted government officials to assess the planned Vietnam manufacturing move; determined the tariff did not apply to the product under review.

Professional Experience Continued

Sales Operations Analyst / Digital Dynamics, Inc.

Dec 2023 - Sep 2024

- Contacted Lam Research and other customer accounts directly to validate product demand when aggregate forecasts did not reliably reflect customer requirements.
- Maintained a consolidated customer-level forecast, incorporating weekly demand revisions to help purchasing assess expected finished-product demand and the subcomponents it needed to buy.
- Identified outdated product costs and potential margin losses in SYSPRO, prompting finance to reassess component, labor, and overhead costs and customer pricing.
- Built Excel and Power BI reports to investigate sales and operational trends, explain exceptions, and communicate findings and recommended follow-up actions to business stakeholders.
- Contributed to the implementation of a company-wide data visualization platform, working across departments to improve access to recurring forecast and operational performance reporting.

Supply Chain Analyst / Digital Dynamics, Inc.

Aug 2023 - Nov 2023

- Cleaned and validated SYSPRO product data across 1,000+ bills of materials for migration into Arena PLM as a member of the PLM-ERP integration team.
- Researched and corrected missing approved manufacturer and vendor list (AML/AVL) information across 800+ BOMs using DigiKey, Mouser, and other component-supplier sources.
- Referred unresolved component identities to engineering for technical review and completion of missing BOM information.
- Cleaned and reconciled SYSPRO purchase order data using SQL, manual review, and coordination with customer service to prepare source data for stakeholder revenue reporting and dashboards.

Technical Skills

Data & Reporting: SQL, Excel, Power Query, Power BI, DOMO, Excel ODBC, data extraction and transformation, KPI dashboards, recurring and ad hoc analysis.

Systems & Automation: SYSPRO ERP, Arena PLM, Forecast2 MRP, Power Automate Cloud, reporting automation, ERP/PLM integration support, system testing and data validation.

Business & Operations Analysis: Demand forecasting, inventory burn-down and valuation, product cost review, SYSPRO PO creation and modification, supplier coordination, consignment operations, sales-order reconciliation, production and purchasing decision support, international shipment coordination.

Process & Data Quality: Workflow design, root-cause investigation, controlled procedures and DCNs, departmental responsibility definition, customer portal workflows, cross-functional coordination.

Education

California State University, Long Beach / Bachelor of Science, Business Management

Aug 2020 - May 2023 (3.7 GPA)

Cabrillo College / Associate of Science, Business Management

Aug 2016 - May 2020 (3.8 GPA)
